Overview

Programmable Logic Controller

XGT Series

neXt Generation Technology

XGT series is the next-generation solution with a new concept providing advanced engineering environment based on open network, fastest processing speed, compact size and user-friendly software.

XGT series is the Industrial Workhorse that can support various applications within the typical industrial plant.

Size Innovation. . . **Compact**

The smallest size

The smallest size (Dimensions 27 × 98 × 90) achieves cost-efficiency and various applications.

Item	Power Supply	CPU	8-slot Base
Size (W × H × D)	55 × 98 × 90	27 × 98 × 90	318 × 98 × 15

Speed Innovation... **Fast**

The Fastest CPU Processing

MPU (NGP 1000) developed by LSIS accomplishes the fastest CPU processing speed. (0.028 μ s/step)

High-speed Interface (Base)

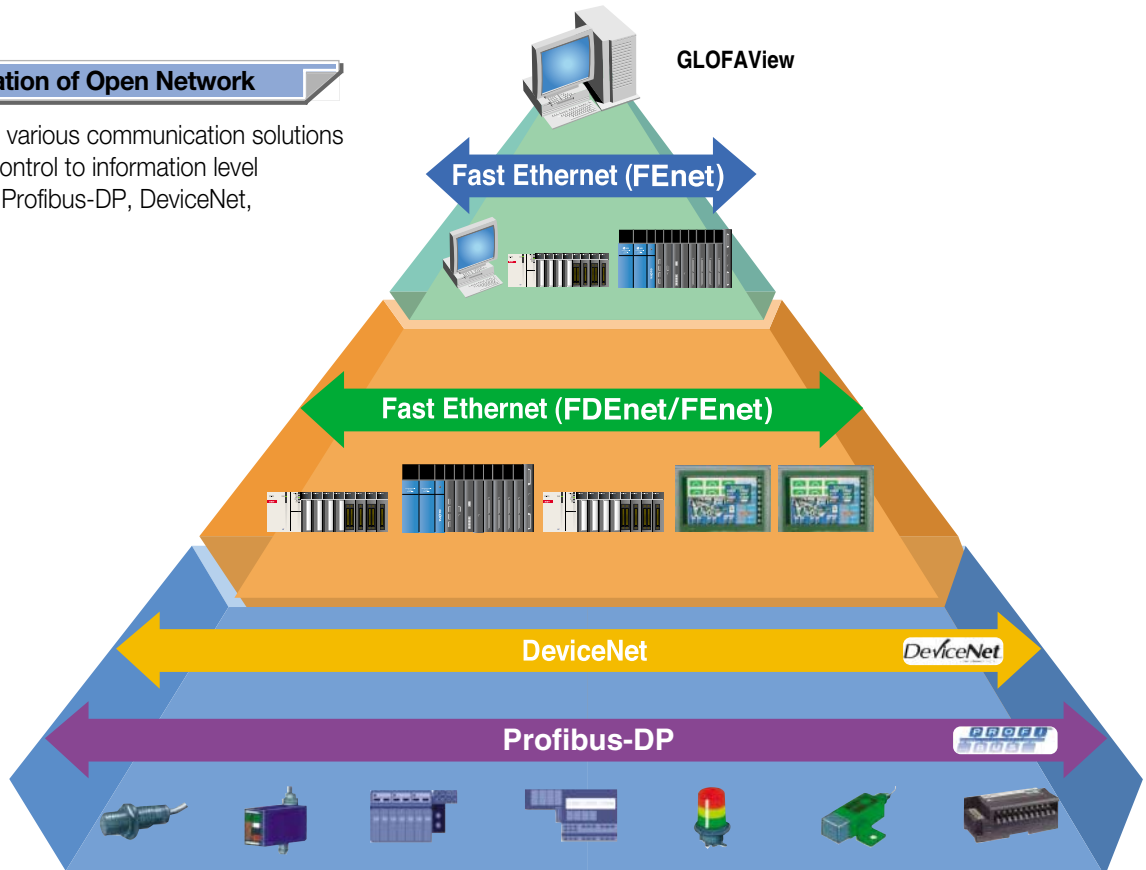

Dedicated bus controller and High-speed transmission algorithm achieve high performance of internal interface.

Main Base	Expansion Base
20Mbyte/sec	5Mbyte/sec

Network Innovation... Flexible

System Integration of Open Network

XGT series support various communication solutions ranging from field control to information level with Fast Ethernet, Profibus-DP, DeviceNet, MODBUS

Item	Fast Ethernet		Cnet	Profibus-DP	DeviceNet
	FEnet	FDEnet			
Transmission speed	100 / 10Mbps		300 ~ 115,200bps	Max. 12Mbps	Max. 500Kbps

Special Register

XGT series expand device memory and support advanced programming environment with Index register (Z), File register (U), and Analog register (U).

R File register
As a non-volatile memory type, data are secured even in times of blackout or CPU reset.

U Analog register
Assigning base, slot and memory buffer of an analog module to device, A/D conversion data can be accessed without analog commands.

Z Index register
Index register is used in the sequence program for array operation.

Example of Analog Register

Analog Operation without Programming

Special module setup and operation is achieved by just parameter setting without additional program.

Program Modularization and Task Operation

Available to run multiful programs through medulization of scan programs based on functions and author, and to operate task programs triggered by specific conditions.

	Program type	Description	Number
Scan program	Scan	Executed in every scan	256-task
	Initialization task	Executed only one time when power turns on	1
	Time driven task	Executed with a constant time interval specified in parameter setting	32
Task program	Internal task	Executed by internal condition	32
	External interrupt task	Executed by external interrupt input	32

IEC standard language (XGI): LD, SFC, ST

ST features

- High-level Language
- Fit for the complicate algorithm
- Various open source (Compatibility)
- Easy data processing
- Convenient text editor

User defined Function block (XGI)

- Standardize the program using function or function block
- Register the standardized program as a library file and reuse the library for another project

Software Innovation. . . Intelligent

Integrated Programming & Engineering

XG5000 Software Package provides integrated engineering environment from basic programming to different special module setting as well as diagnosis. This package consists of XG5000 (PLC programming), XG-PD (Communication programming) and APM Software Package (Positioning programming).

XG5000

Program Editing & Engineering Software
Windows-based Easy Operation
Multi-PLC Multi-Programming Support
Various Monitoring & Diagnosis Functions

XG-PD

Comm. & Network Parameter Setting
Protocol Editing / Network Diagnosis
Frame Monitoring / Protocol Analysis

APM S/W package

Positioning Parameter Setting
Data Editing in EXCEL
Various Monitoring & Diagnosis
Tracking Function

CPU

CPU & System configuration

XGT series contain variety of CPU types for customized solutions which support wide coverage from small/middle- to large size-system control.

IEC based CPU for high-speed and large scale application

XGI-CPUU (IEC Standard)

- Program capacity: 1Mbyte
- I/O points: 6,144
- I/O device point: 131,072 (Remote I/O)
- Processing speed: 28ns/step
- IEC 61131-3 standard programming
 - LD (ladder), SFC (Sequential Function Chart)
 - ST (Structured Text)
 - User defined FB (Function block)
- Powerful built-in PID and Process control
 - Max. 256 loops and variety of process functions
- Utilize the same I/O with XGK CPU
- Enable to convert from GLOGA PLC program to XGI program

XGI-CPUH (IEC Standard)

- Program capacity: 512Kbyte
- I/O points: 6,144
- I/O device point: 131,072 (Remote I/O)
- Processing speed: 28ns/step
- IEC 61131-3 standard programming
 - LD (ladder), SFC (Sequential Function Chart)
 - ST (Structured Text)
 - User defined FB (Function block)
- Powerful built-in PID and Process control
 - Max. 256 loops and variety of process functions
- Utilize the same I/O with XGK CPU
- Enable to convert from GLOGA PLC program to XGI program

Premium CPU for high-speed and large scale application

XGK-CPUU (Ultra capacity)

- Program capacity: 128K steps
- I/O points: 6,144
- I/O device point: 32,000 (Remote I/O)
- Processing speed: 28ns/step

XGK-CPUH (High performance)

- Program capacity: 64K steps
- I/O points: 6,144
- I/O device point: 32,000 (Remote I/O)
- Processing speed: 28ns/step

XGK-CPUA (Advanced)

- Program capacity: 32K step
- I/O point: 3,072
- I/O device point: 32,000 (Remote I/O)
- Processing speed: 28ns/step

General sequence controller PLC CPU

XGK-CPUS (Standard)

- Program capacity: 32K steps
- I/O points: 3,072
- I/O device point: 32,000 (Remote I/O)
- Processing speed: 84ns/step

XGK-CPUE (Economic)

- Program capacity: 16K step
- I/O point: 1,536
- I/O device point: 32,000 (Remote I/O)
- Processing speed: 84ns/step

Expansion system composition

1. The following figure is the example of expansion system with the fixed I/O point type of XGK-CPUH.
2. The address of I/O point is adjustable by XG5000 parameter.

The lowest expansion base should be connected to the upper stage with expansion terminator(XGT-TERA).

XGT-TERA should be installed at the end of the last expansion base.

Features

- 8, 16, 32, 64 points I/O module
- Operation monitoring by LED display
- Easy maintenance: Terminal block type, one-touch installation of module

Precaution during installation of I/O module

- XGT has 2 kinds of digital input type: Current sink input, Current source input. For DC input module has different wiring depending on the input type, digital input type should be selected with consideration about connected input device.
- Max. number of simultaneous input point differs according to the module type. Therefore, review specification of input module before its application.
- Use an interrupt module when a response of high-speed input is demanded. But only one interrupt module can be installed per CPU module.
- If switching frequency is high or inductive switching load is used, the lifespan of relay output module will be reduced. Therefore, it is recommended to use transistor output module or triac output module.
- When driving an inductive load with output module, set the maximum switching frequency as 'ON' for 1 second and 'OFF' for 1 second.
- When using counter or timer with DC/DC converter, it is possible to have inrush current which cause a break down. Therefore to reduce an effect of inrush current, connect resistor or inductor to load or use the module whose max. load current is high.

- Fuse of output module is not exchangeable to prevent a damage of external wiring when output module has a short-circuit.
- The number of simultaneous 'ON' points varies depending on input voltage, ambient temperature. Refer to the specification of input module.

- The following graph presents the relay lifespan of relay output module. It shows the maximum lifespan of relay which is used in the relay output.

- Compressed terminal attaching sleeve cannot be mounted to XGT terminal block. The following picture shows appropriate compressed terminals for terminal block.

- Use 0.3~0.75mm² twisted pair, below 2.8mm thickness cable for connecting to terminal block.
- Be careful when choosing and using the cable since the permissible current differs according to the insulation thickness.
- Joint torque of fixed screw and terminal block screw of the module needs to be within the range in the following table.

Joint	Joint torque range
I/O module terminal block screw (M3)	42~58 N · cm
I/O module terminal block fixed screw (M3)	68~89 N · cm

- Thermal protector is built in transistor module. Thermal protector is a function that protects PLC from an overload and overheating.

Easy expansion installation using network

- Max. 31 expansion base
Distance: Fiber 2km (Max. expansion 60km), Twisted pair 100m (Max. expansion 3km)
- Program upload and download via expansion base
- No limit to install the communication master on the expansion base

Enhanced maintenance via system history and network ring configuration

- Convenient system analyze using Operation history, Error history, System history
- Ring configuration to prevent a line disconnection error
- Network monitoring, Protocol monitoring function
- Error channel monitoring via flag
- Graphic display for the system configuration
- Safe module exchange via Wizard

IEC 61131-3 Standard language

- LD, ST, SFC, IL (read only)
- Program configuration and data type based on IEC

Variety of communication function

- Easy interface using Open network (Ethernet, Profibus-DP, DeviceNet, RS-232C, RS-422/485, etc)
- Max. 24 communication module installation on the expansion base (High speed link 12, P2P 8)
- Network diagnosis via network and frame monitoring
- PLC link via dedicated communication base on Ethernet (RAPIEnet)

Variety of input and output module

- 8 / 16 / 32 / 64 points (8 / 16 points Relay output)
- Input / Output / Mixed module

Enhanced analog function

- Enable to install the analog module on the expansion base (Max. 250, Analog input 139)
- Insulated type and Temperature module
- Easy to set the parameter via I/O parameter and flag
- Debugging function via special module monitoring

Integrated programming & engineering environment

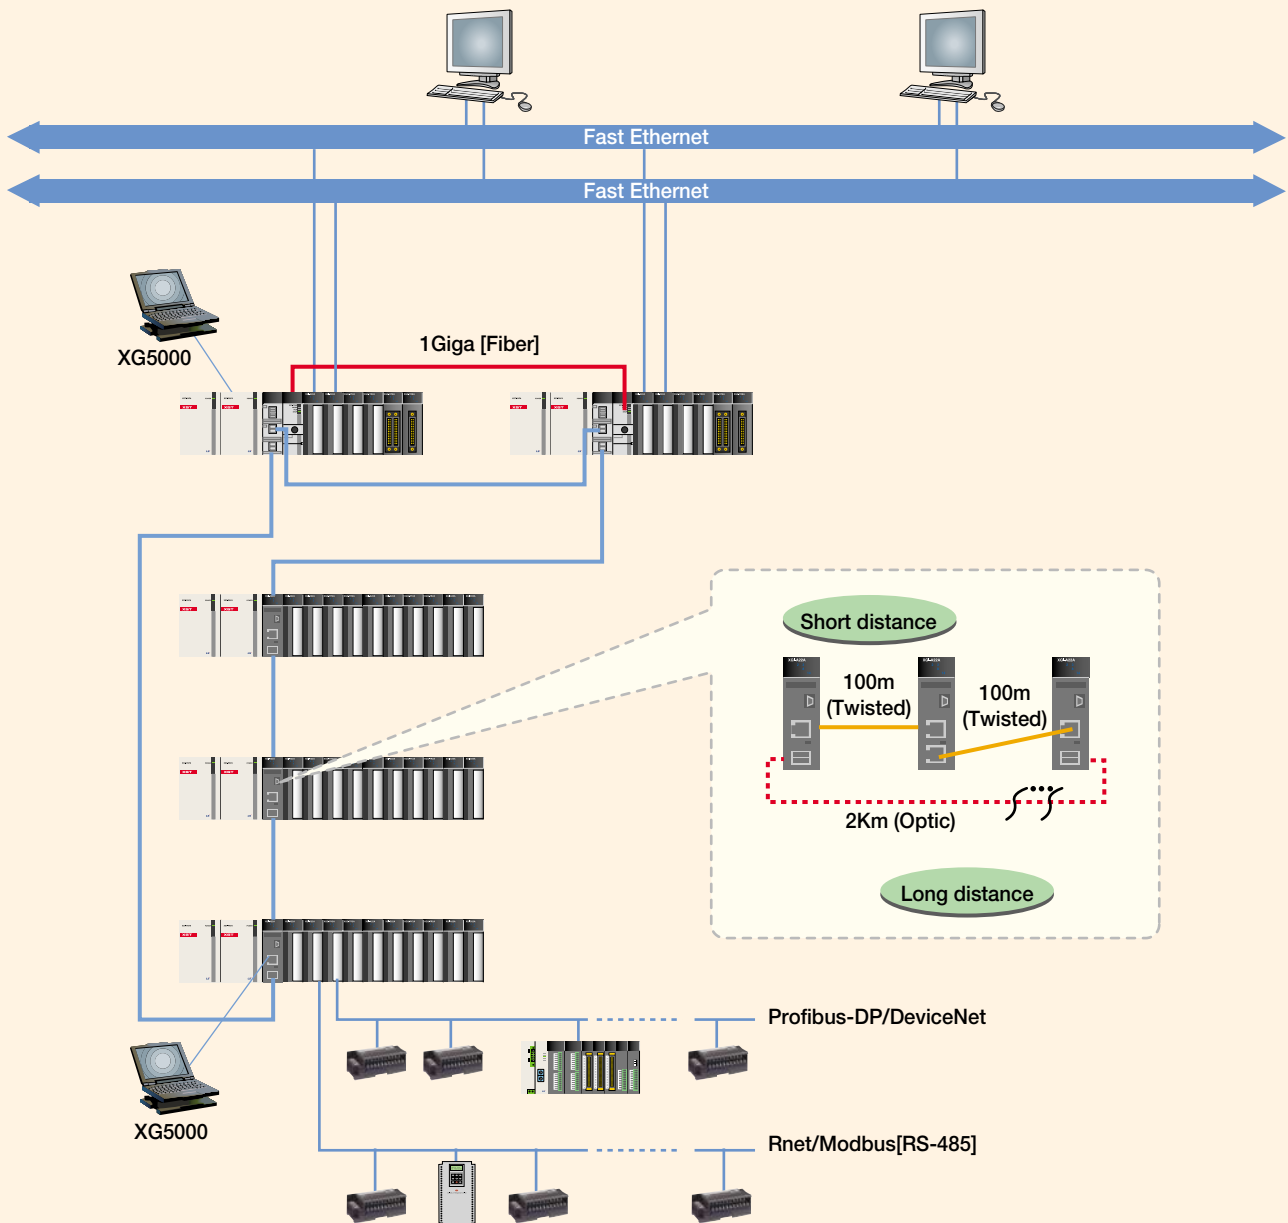

- XG5000 : Easy to program, various monitoring functions and enhanced editing function
- XG-PD : Convenient setup for communication and network parameter
- XG-PDAPM software package: Software package for positioning module

- Max. 6 repeaters (up to 5.25km)
- Network management using Auto-scan
(Slave module information)

XGT Dnet (DeviceNet)

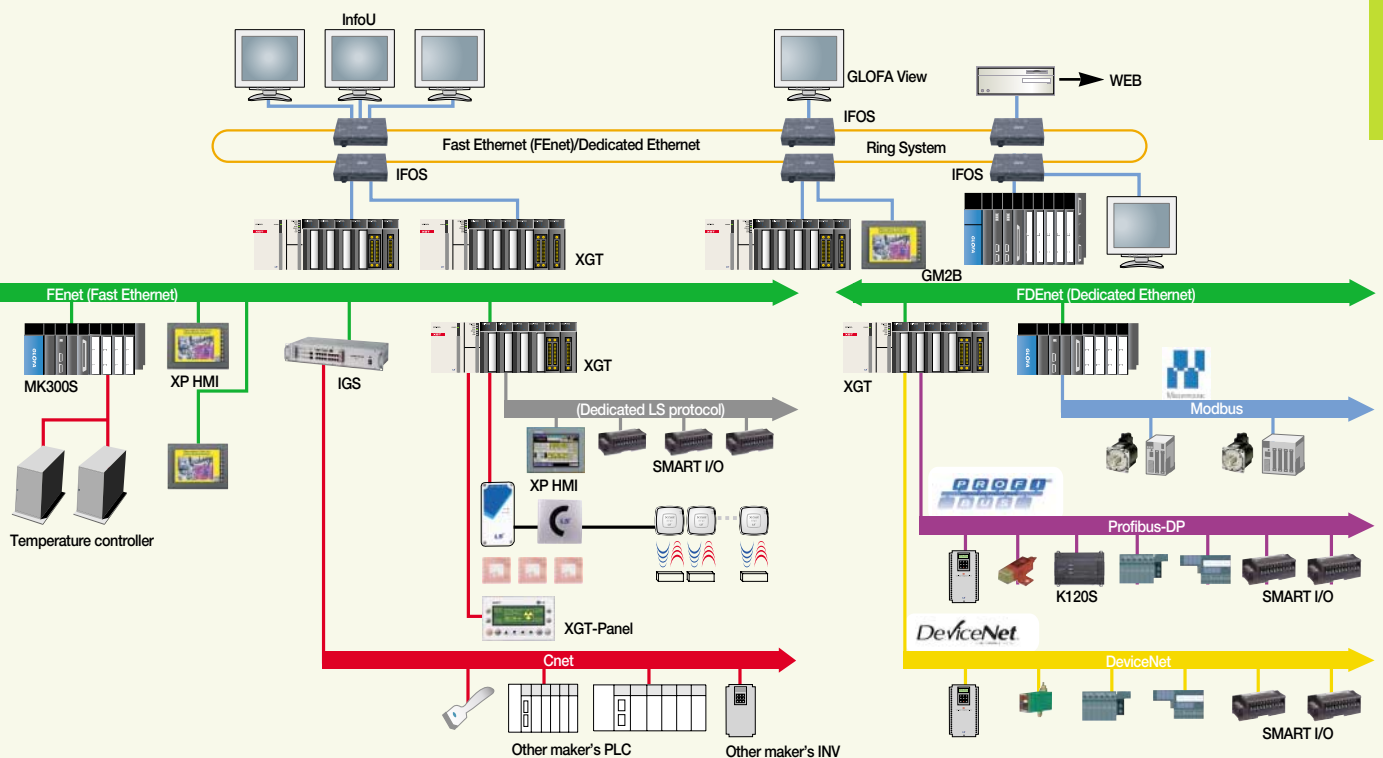

- Connectable to other PLCs and control device
- Compliance of the ODVA standard
- Flexible communication speed setting: 125/250/500Kbps
- Multi-drop and T branch connection
- Long communication distance: Max. 500m

XGT Pnet (Profibus-DP)

- Optimum communication for a master automation device
and distributed slave I/O devices
- Fast slave communication omitting application layer
- Long communication distance: Max. 1200m
- Communication using High-speed link parameter

No. of network module available

Item	XGK / XGI / XGR CPU
Total network module	24
High-speed link module	12
P2P service	8

Features

100Mbps Dual Port Ethernet

- Communication speed: 100Mbps
- Dual port (T.Pair / F.Optic / Hybrid)
- Built-in high performance industrial switch
- Cyclic Communication (Broadcast Service)
 - 1block: 200word
 - Send 64block / Receive 128block
- Event Communication (Peer to Peer Service)

Hardware based Full duplex switching

- Dual port full duplex switching (Forwarding/Receiving)
- Real-time / Non real-time service (Frame)

Redundancy System

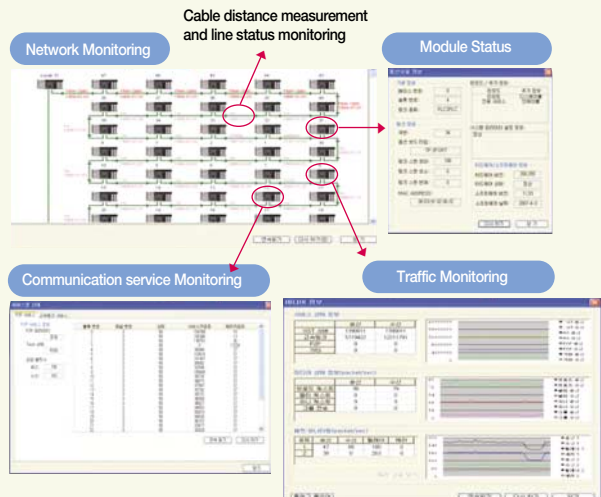

Hybrid System

- Twisted pair, Fiber optic, Hybrid(T.P+F.O)

Intelligent Diagnostic Functions

- Alarm for station number collision
- Cable distance measurement (Twisted pair cable)
- Convenient wiring using auto cross over
- Various diagnosis and Network status information
 - (a) CPU status
 - (b) Communication module status
 - (c) Communication service (HS link, Dedicated service, P2P) status
 - (d) Auto scan function to supply module information within the network
 - (e) Packet and Data ring monitoring receiving to Communication module
 - (f) Module diagnosis via network

Features

- Easy protocol editing and communication parameter setting: XG-PD
- Long-distance communication via modem connection
- Dedicated protocol for multi-drop configuration connectable up to 32 units
- RS-232C/422 communication port
- Flexible communication speed setting (300~115,200bps)
- Supporting full duplex and half duplex communication
- Max. 12 modules available in one CPU
- P2P service: User-defined communication and XGT/MODBUS master
- Various connection to MMI S/W (XGT, MODBUS RTU, MODBUS ASCII)
- Various diagnosis functions using XG-PD (I/O, link status, service status)
- Communication service information (Dedicated service, P2P service)
- Supporting simultaneously dedicated service in remote connection
- Communication without additional setting when replacing communication module

Various independent operation mode

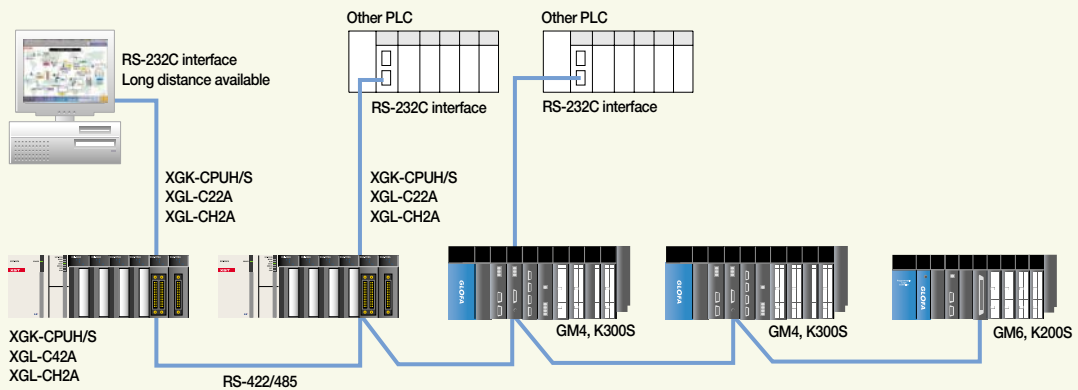

- Operation mode
- Dedicated protocol mode (Simultaneous support)
- Program upload/download by XG5000 protocol (RS-232C)
Communication using LSIS dedicated protocol
- User-defined communication of P2P mode and XGT/MODBUS master

Features

- DeviceNet protocol
- Direct control of various I/O devices via Dnet system
- Max. 63 slave modules controlled by one master module
- Flexibility in network configuration: Multi-drop and T branch connection
- Connectable to other master module and various slave modules
- Providing 'Auto Network Scan' function and various information with configuration tool (SyCon)
- Communication using High-speed link parameter
- Connectable to various slave I/O including other module (Common I/O, Actuator, Switch, Optical switch, Valve, Inverter, A/D module, Position controller etc..)
- Automatic monitoring of slave modules in the network: Auto-scan (XG-PD)
- Easy expansion: up to 12 master modules
- Network setting by SyCon/XG-PD (Parameter setting, diagnosis and monitoring)

System configuration with other products

Communication among PLCs

This is a system configuration communicating between XGT PLCs by serial communication. In this case, PLC 1 is the master (Client) and other PLC should be slaves (Server). It is called Master/Slave communication. Master PLC is defined by comm. basic parameter and P2P setting. And slave PLC is defined by basic parameter and driver setting.

Configuration

PLC1 reads present value, C0000 of PLC2's up-counter and then saves it in M0200 of PLC1.

Data memory

PLC station	PLC memory	Setting Item
PLC 1	M0100	1. XG-PD parameter setting, 2. XG5000 programming
PLC 2	C0000	1. XG-PD parameter setting, 2. XG5000 programming

XG-PD setting

PLC 1 setting (Master)

Communication basic parameter setting
Setting up station number, communication speed, etc. And setting up the operation mode as P2P

P2P channel setting
Setting up channel 01 as [XGT client]

P2P setting
Setting up P2P block (READ)

Communication data setting
Setting up Read area, Save area, etc.

Enable Link
Enabling P2P for communication start

Parameter writing
Downloading parameters to PLC after online connection

PLC 2 setting (Slave)

Communication parameter setting
Setting up station number and channel 01 mode as 1 and XGT server

* For basic parameter setting and SyCon setting/change, reset the module (Online reset).

XG5000 programming

PLC station 2 setting

Make up-counter program using CTU command

PLC station 1 setting

Check out the counter value of M0100 is transmitted.

HMI communication configuration

This is a system configuration to monitor and control PLC (XGT) by XP (HMI). In this case, PLC is the slave (Server) and XP should be the master (Client). PLC is defined by comm. basic parameter and driver setting.

Configuration

Making On/Off touch tag for controlling M0001 of XGT

Data memory

PLC memory	Setting item	PMU
M000D1	1. XG-PD parameter setting	Using touch tag
	2. XG5000 programming	

XG-PD setting

Basic communication parameter setting
Setting up station number, communication speed, etc. And setting up the operation mode as XGT server

Write Parameter (Standard Settings, HS Link, P2P)
Read Parameter (Standard Settings, HS Link, P2P)
Enable Link (HS Link, P2P)

Parameter writing
Downloading parameters to PLC after online connection

PMU setting
Setting up communication setting (speed, data, stop, parity, etc) same as XGT

* For basic parameter setting and SyCon setting/change, reset the module (Online reset).

XG5000 programming

Create program that P00010 is on right after M00001 is on.

Network

Network / Communication example (Ethernet)

HMI communication configuration

This is a data communication system configuration among XGT PLCs via Ethernet network. In this case, communication is possible by HS link among PLCs. It just needs basic parameter setting and HS link item setting.

Configuration

Read the up-counter value C0000 of PLC1 and monitor it in GLOFAView.

Data memory

PLC memory	Setting item	GLOFAView
C0000	1. XG-PD parameter setting	Using analog tag
	2. XG5000 programming	

XG-PD setting

PLC 1 setting (Master)

Basic communication parameter setting
Specifying IP address and Subnet mask of PLC as above

Parameter writing
Downloading parameters to PLC after online connection

Ping Test
Starting diagnosis after inputting IP address of PLC

System Diagnosis
Selecting Ping Test

Communication test
Checking online and system diagnosis

* For basic parameter setting and SyCon setting/change, reset the module (Online reset).

XG5000 programming

Make the up-counter program using CTU command.

Check out if the counter value of CTU value is transmitted.

High-speed link communication

This is a configuration for XGT to communicate each other via Ethernet. It just needs communication basic parameter setting and High-speed link item setting.

Configuration

Read present value C0000 of PLC1 and transmit it to M0000 of PLC2.

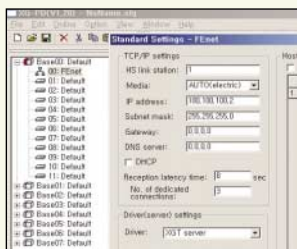

Data memory

PLC station	PLC memory	Setting Item
PLC 1	C0000	1. XG-PD parameter setting, 2. XG5000 programming
PLC 2	M0100	1. XG-PD parameter setting, 2. XG5000 programming

XG-PD setting

PLC station 1 setting

Basic communication parameter setting
Specifying HS link station, IP address and Subnet mask of PLC as above

Communication data setting
Setting up communication data in HS link item as above

Parameter writing
Downloading parameters to PLC after online connection

Enable Link
Enabling link for communication start

PLC station 2 setting

Basic communication parameter setting
Specifying HS link station, IP address and Subnet mask of PLC as above

Communication data setting
Setting up communication data in HS link item as above

Parameter writing
Downloading parameters to PLC after online connection

Enable Link
Enabling link for communication start

* For basic parameter setting and SyCon setting/change, reset the module (Online reset).

XG5000 programming

PLC1 setting

Make the up-counter program using CTU command

PLC2 setting

Check out if the counter value of M0100 is transmitted.

Remote I/O configuration

LSIS developed communication method is Rnet which is 'Distributed Control System' using Smart I/O. In this case, PLC is the master and the other Smart I/O are slaves. It just needs basic parameter setting for communication and High-speed link setting.

Configuration

PLC controls each Smart I/O (16-point).

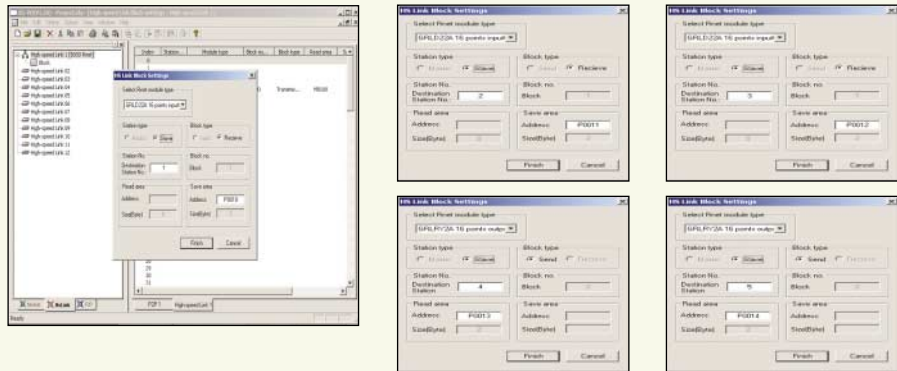

Data memory

Smart I/O #	Smart I/O address	PLC address	Setting item
1	P0000	P0010 (P00100~P0010F)	1. XG-PD parameter setting, 2. XG5000 programming

XG5000 programming

Write a program using I/O address of Smart I/O Dnet.

Network / Communication example (SyCon setting Profibus, DeviceNet)

SyCon is the dedicated software that help user set up the communication environment for Profibus-DP and DeviceNet more easily and conveniently.

Example of application

New file
Select fieldbus that is used.

Basic communication parameter setting
Select [Master] in Insert menu.

Master module setting
Select [COM-C-DNM] for DeviceNet.
Select [COM-C-DPM] for Profibus-DP.

Bus parameter setting
Set up communication speed of master module.

Master module setting
After clicking the port button, check the right check-box.

Automatic network scan of connected Smart I/O
Perform automatic network scan after station number setting and wiring with remote device such as Smart I/O.
At this time, all remote devices should be in normal connection (Power-On, etc).
After network scan is completed, press [Automatic Configuration] button and [OK] button.

Network checking
Check normal network (remote) condition.

Parameter download

Disconnect
Disconnect the port in Device Assignment.

Special

XGT series offer diverse special modules such as analog, HSC, and positioning to satisfy complicated industrial needs

Special

Revolution of easy to use ...XGT Special module

Fast processing of parameter and data of special module

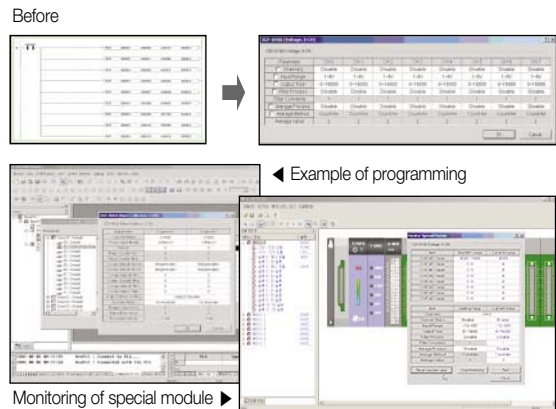

- Continually refreshing operation data of special module by CPU module
- Including contact points such as conversion data of AD/DA module and command of HSC & positioning module

Easy-to-use (Easy operation parameter setting and data monitoring)

- Convenient parameter setting available through XG5000
- Providing useful functions that can monitor and test operation data and contact points through XG5000

Simple maintenance (Changing online module)

- Without turning off and holding CPU, users can change special module with ease.

Analog input module

XGF-AV8A	8 channels, voltage input
XGF-AC8A	8 channels, current input
XGF-AD4S	4 channels, voltage/current input
XGF-AD8A	8 channels, voltage/current input
XGF-AD16A	16 channels, voltage/current input

Analog output module

XGF-DV4A	4 channels, voltage output
XGF-DV4S	4 channels, voltage output, insulation
XGF-DC4A	4 channels, current output
XGF-DC4S	4 channels, current output, insulation
XGF-DV8A	8 channels, voltage output
XGF-DC8A	8 channels, current output

Temperature input module

XGF-TC4S	4 channels, thermocouple input, Insulation
XGF-RD4A	4 channels, RTD input
XGF-RD4S	4 channels, RTD input, Insulation

High-speed counter module

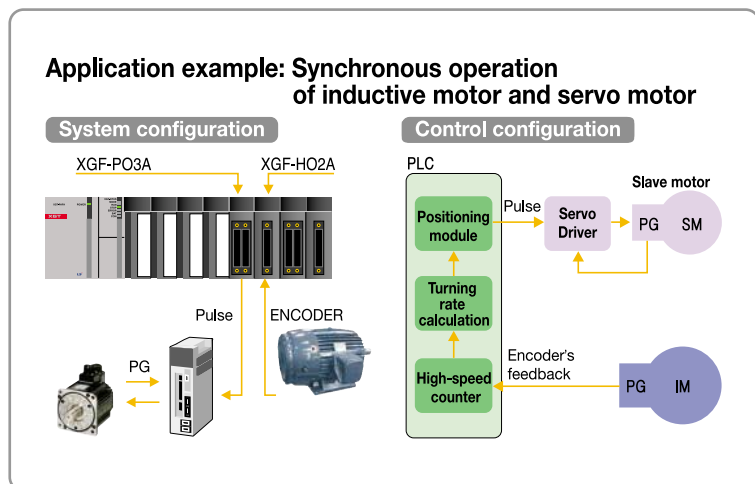

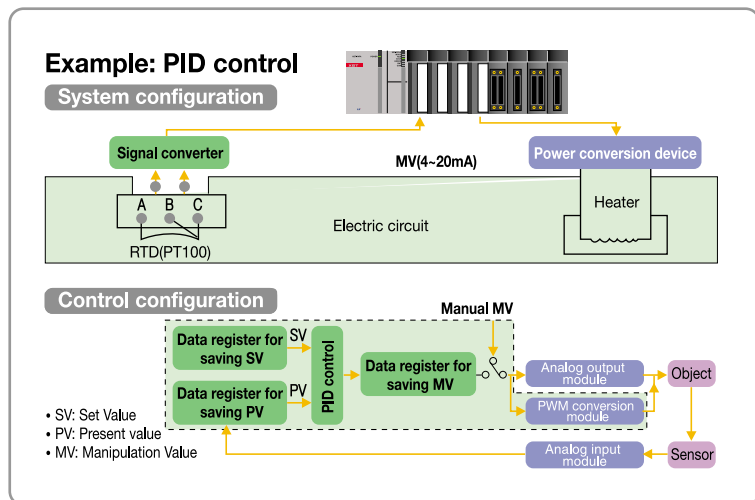

XGF-HO2A	2 channels, Open collector
XGF-HD2A	2 channels, Line driver

Positioning module

XGF-PO(1/2/3)A	1/2/3-axis, Open collector
XGF-PD(1/2/3)A	1/2/3-axis, Line Driver

Temperature controller

XGF-TC4UD	4 channels input: voltage/current/TC/RTD
	8 channels output: current/TR

- Parameter setting and monitoring using XG5000
- Incremental encoder available
- Supporting various pulse input (5V, 12V, 24V)
- Various multiplication (1/2 phase pulse input)
- External present input
- Providing function to prevent from counting external signal
- Supporting HTL-level incremental encoder in the line-drive input type

Configuration

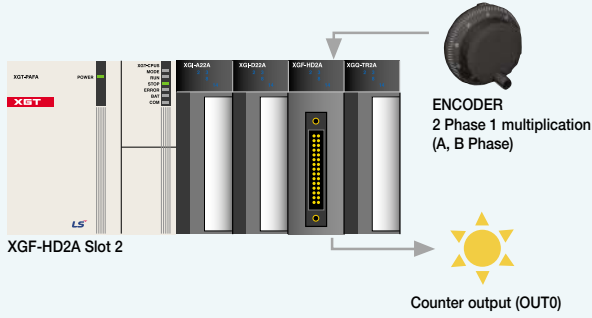

Special

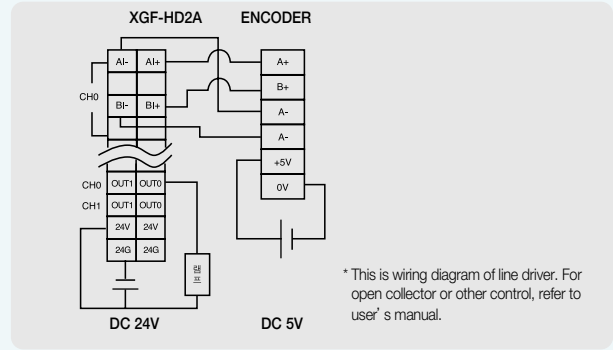

Special module / High-speed counter module (Example)

This is a simple example of high-speed counter module setting.
For more details, refer to user's manual.

System configuration

Wiring

Control configuration

- Light a lamp of output when present value reaches 1000 of pulse input counted by encoder.
- Current value of pulse is saved in D100~D101 and is monitored.

Module test (Online)

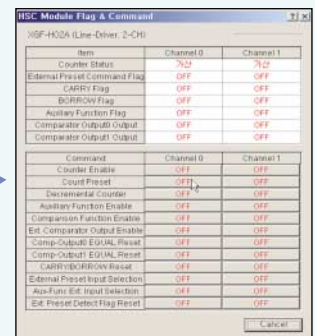

- Module test function of XGT enables to monitor operation status of high-speed counter module and to test-run.

Select [Monitor] → [Special Module Monitoring] in menu and appoint high-speed counter.

After pressing the button for [Start Monitoring], press the button [FLAG monitor].

Change [Counter Enable] status to ON.

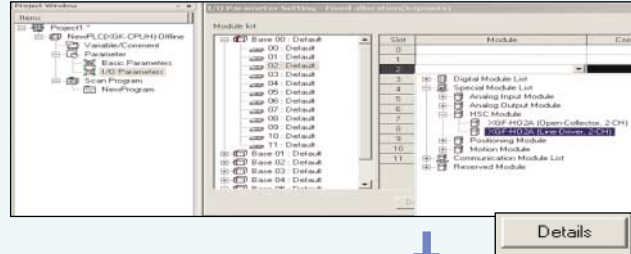

Check current counting value in 'Monitor Special Module' screen box.

Parameter setting

- In I/O parameter setting box, select slot and analog module that you want to use.
(This example shows to select 2-channel line driver.)

Press the <Details> button at lower end of parameter setting box after selecting the module.

Input 1000 as Max. and Min. comparison output.

Programming

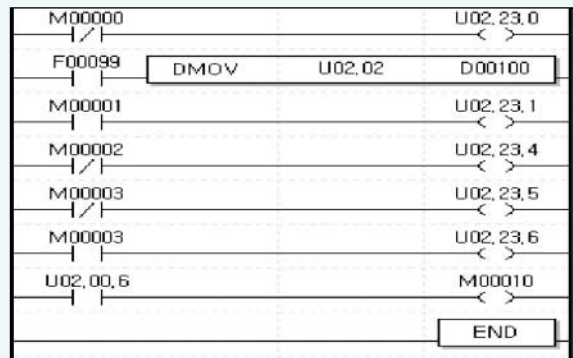

- After completing programming like following figure, download it to PLC and check operation status.

Special devices for programming

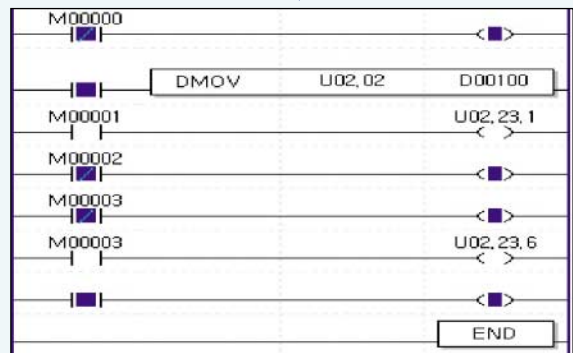

Refer to user's manual for more details.

After downloading, monitor operation status.

For monitoring just present value, follow the example.

Features

- Highly reliable position control with LSIS ASIC-embedded processor
- Enhanced control with fast control processing speed
- High-speed motor control (Max. pulse output: 1Mbps)
- Circular/linear interpolation, separate/synchronous operation
- Trapezoidal & S-curve acceleration/deceleration
- Easy and quick control through external input (JOG operation included)
- Encoder input support
- High-speed processing of command (4ms)
- Easy to set positioning parameters (Windows)
- Monitoring/Tracking/Simulation
- Available to edit operation parameter data in EXCEL
- Self-diagnosis
- Real-time information and solution for each error

Special module / Positioning module (Example)

This is a simple example to control 1-axis servo motor.

System configuration

- Positioning system consists of control part, power part, and machinery part.
- Control part: Install APM module on base and complete parameter setting and programming.
- Power part: Power part generates momentum, and it consists of [servo-driver + servo-motor] and [step-driver + step-motor].
- Machinery part: Machinery part is to transport objects, and it can be ball screw, timing belt and rack gear.

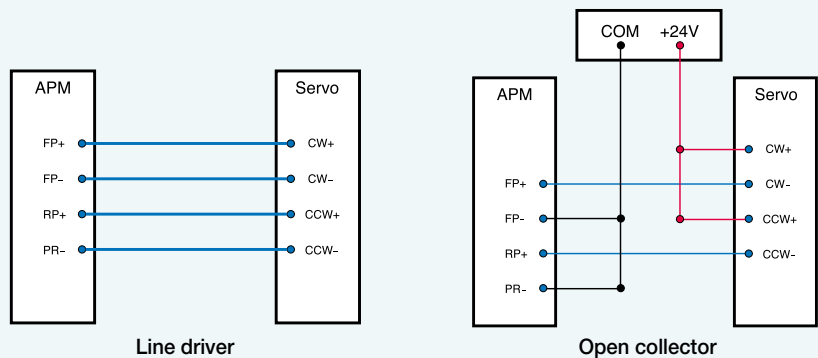

System design

- APM: Determine type and quantity considering the number of control axis and operation function.
- Driver: Select driver with identical output type of APM.
(In case output type of APM is line driver, driver should support a pulse train input type of line driver.)
- Motor: Select capacity considering operation characteristics of load.
- Mechanical: Design precise mechanical system to minimize error.

Connection to drivers

- The following picture is wiring pulse train signal between driver and APM for pulse train signal.
- Terminal besides pulse train signal is used additionally according to user-purpose, system characteristics.
- For wiring of optional terminal of Servo (Step) driver, refer to user's manual.

Parameter, data setting and transmission

- Set system characteristic, target location, operation speed, and operation type using APM software package.
- Transmit operation parameter and data to APM.

Target location, speed, operation type, operation data

Initial system inspection

- Perform a trial-run using APM Software Package, and check external wiring, operation data setting, and status of machinery part. It is recommended to do trial-run before programming.
- If a program is saved in CPU and operation mode is 'RUN', a unexpected fault can occur due to disagreement between operation condition of operation control program and operation result of APM Software Package.

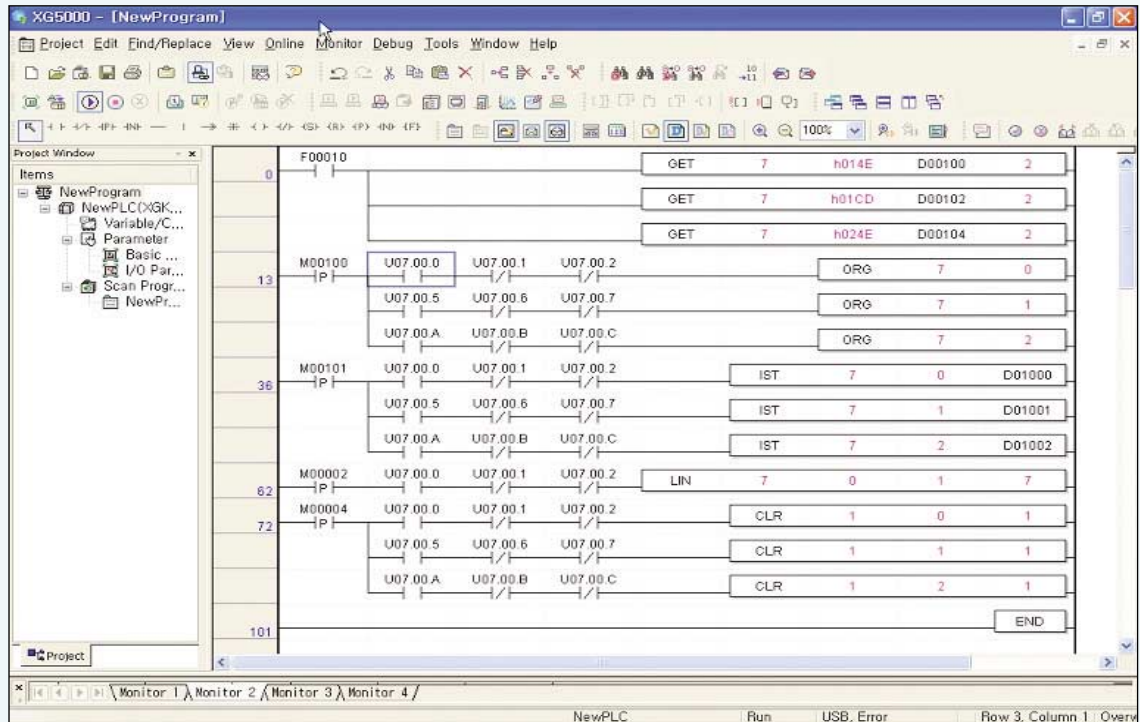

Special

Operate APM without positioning programming

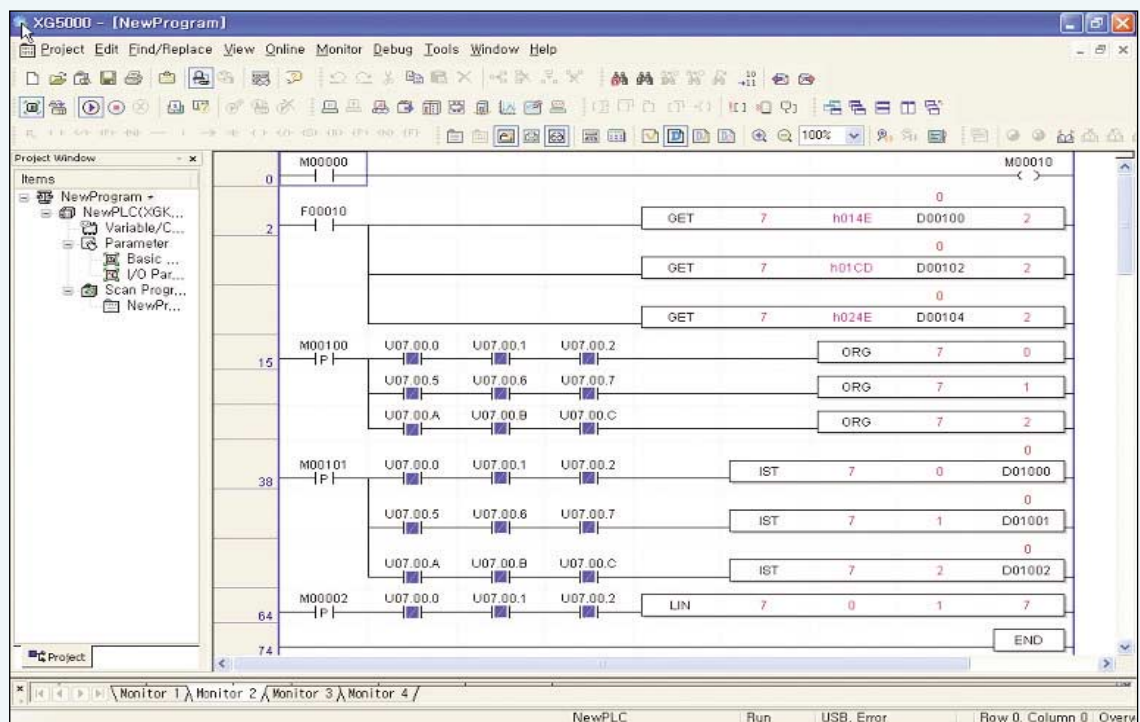

Programming

- Create a program using dedicated command for APM control.
ex) Origin point return-ORG, Independent operation-IST

Program monitoring

- Monitor output condition following input condition and inspect operation status of APM and correct programming error.

Features

- Supports various additional functions (average, alarm, filter)
- Special module parameter setting and monitoring with XG5000
- Supports digital conversion, temperature display and user scaling

Characteristics of temperature conversion

Wiring

• Connection with 2-wire type sensor

• Connection with 3-wire type sensor

• Connection with 4-wire type sensor

1) When sensor and compensating wire are shielded, shield-connection to FG terminal of the module is available.

2) The wiring of 4-wire type sensor is identical with the wiring of 3-wire type sensor. 3 wires is connected to the module. But the other wire is not connected with the module.

Input wiring

- 1) When sensor and compensating wire are shielded, shield connection to FG terminal is available.
- 2) To minimize an error, overall temperature of block terminal need to be equal.
- 3) Compensating sensor should be the same type of sensor which is used for measurement.

System requirement

Item	System requirement
O/S	Windows 2000, XP (Limited use in Windows 98, ME)
CPU	IBM compatible PC with Min. 200MHz Pentium processor
Memory	Min. 128M
HDD	100 MB (Free memory space)
Serial port	Communication port for program transmission (RS-232C, USB)
Printer	Compatible with Windows 98 or later
Mouse	Compatible with Windows 98 or later

Variable and programming editing

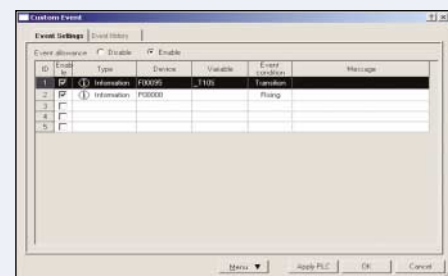

- Data input like EXCEL
- Cell-unit edit
- Auto Fill function
- Compatible with Microsoft Excel
- Redo and Undo (Unlimited)
- Segment screen edit

Improved diagnosis and maintenance

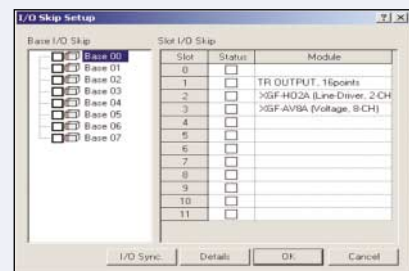

Module exchange wizard
It supports safe module exchange during 'RUN' mode.

User-defined event
By registering user-defined event, users can read the record of specified event and use it for PLC operation and debugging.

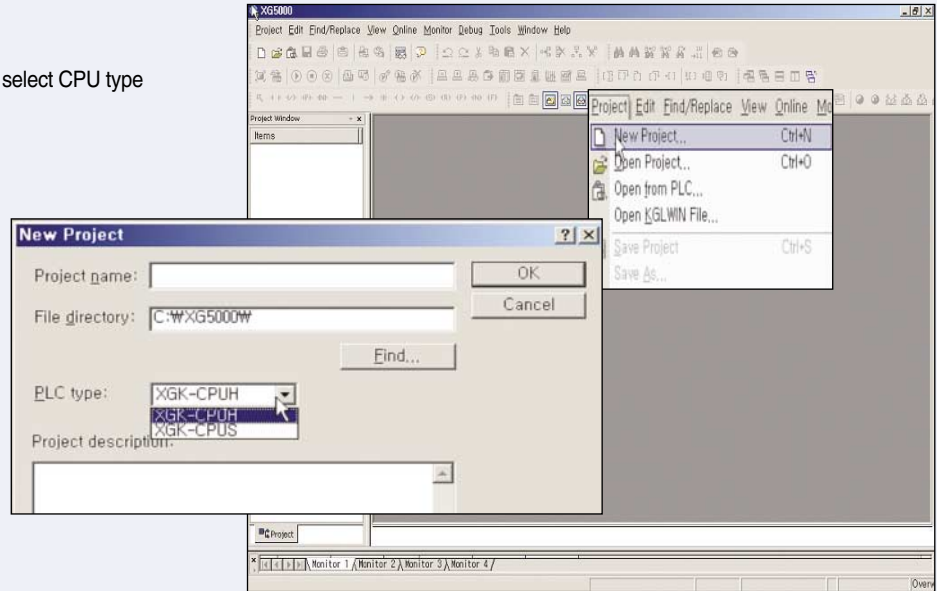

Forced I/O
The status of external output device can be checked without program. And when input device breaks down, forced input function specifies ON/OFF and can operate the system without interruption of equipment.

I/O skip, Error Mask
I/O inspection and renewal can be set for specific module and continuous operation is available when an error is occurred.

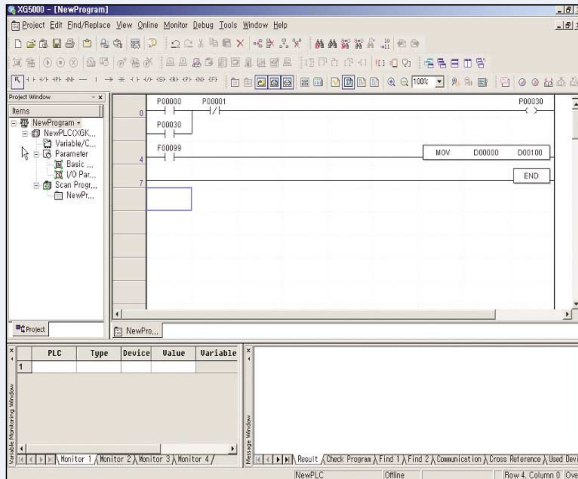

Program editing

- Start XG5000
- Select [New Project]
- Write project name and select CPU type

Configure ladder lines as below with ladder input tool bar

- Select input point and command with ladder tool bar.

Icon	Description	Short key
	Arrow mode	ESC
	Normally open contact	F3
	Normally closed contact	F4
	Positive transition-sensing contact (On for 1 scan when Off-->On)	Shift+F1
	Negative transition-sensing contact (On for 1 scan when On-->Off)	Shift+F2

	RESET coil	Shift+F4
	Positive transition-sensing coil (On for 1 scan when Off-->On)	Shift+F5
	Negative transition-sensing coil (On for 1 scan when On-->Off)	Shift+F6
	Function	F10

Note) Addition of 'EDGE' detection instructions

Develop user-friendly programming through adding D, D NOT instructions (Rising EDGE, dropping EDGE) to contact and output coil.

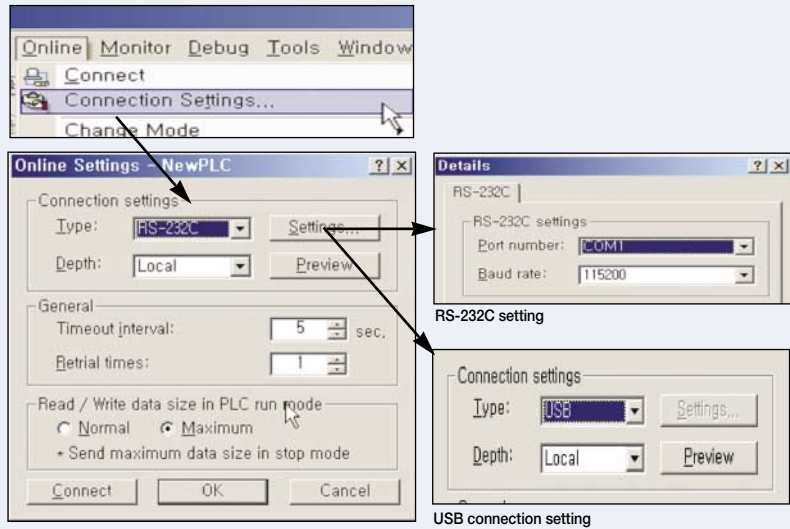

Program download

Connection setting

- Check a setting for connection between XGT and XG5000
- XGT supports USB and RS-232C

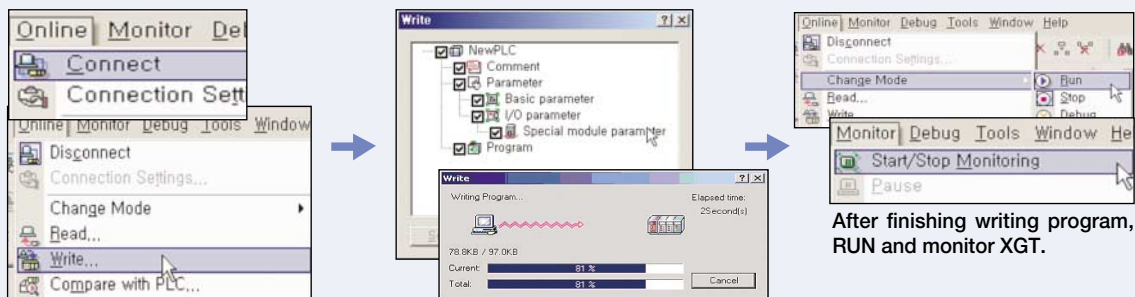

Set up communication port and download speed

* using "USB TO RS-232C" converter, 115,200bps connection may be unavailable depending on characteristics of converter. In this case, change the communication speed to 38,400bps.

Connection

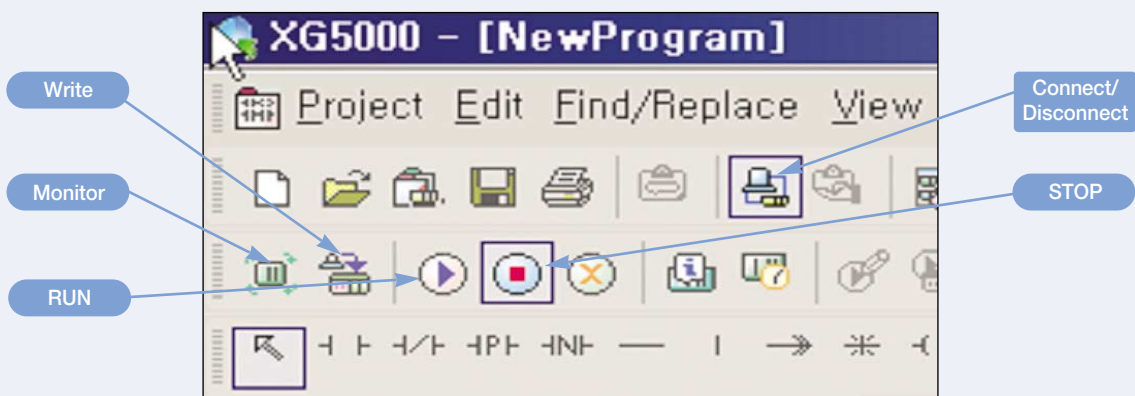

Connect to PLC and download the program as below.

After finishing writing program, RUN and monitor XGT.

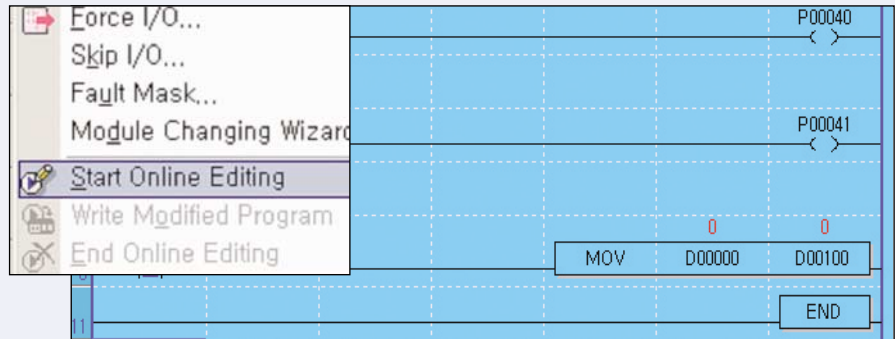

Short icon

* XGT doesn't support collective-writing monitoring for system safety.

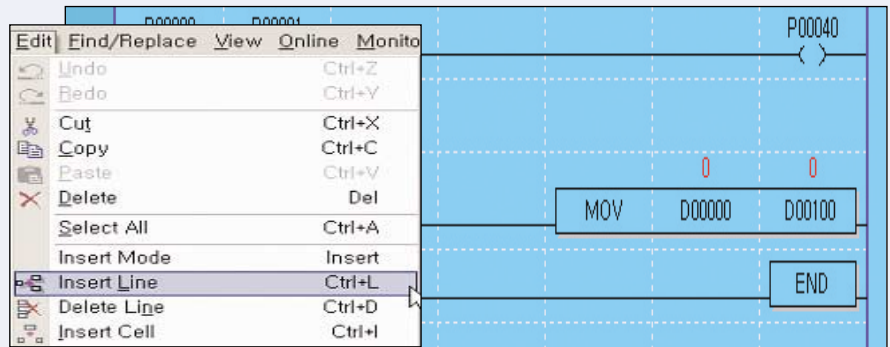

Online Editing

Select [Start Online Editing] in Online menu.

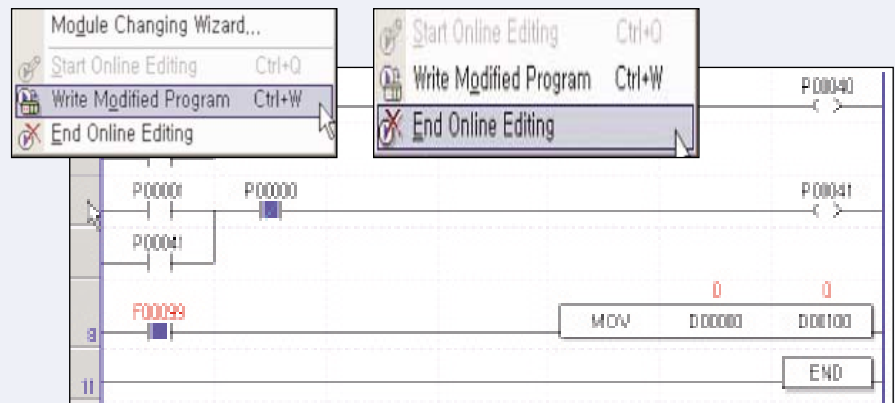

When starting Online Editing, the screen color becomes blue.

Modify the program.

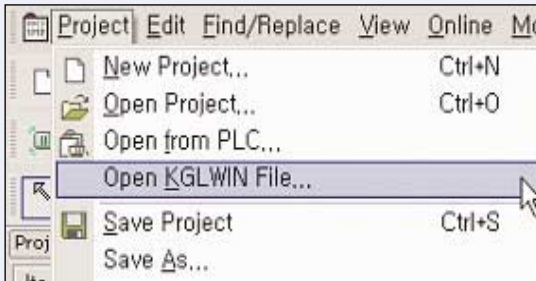

Edit menu

After finishing modifying the program, select [Write Modified Program] and [End Online Editing].

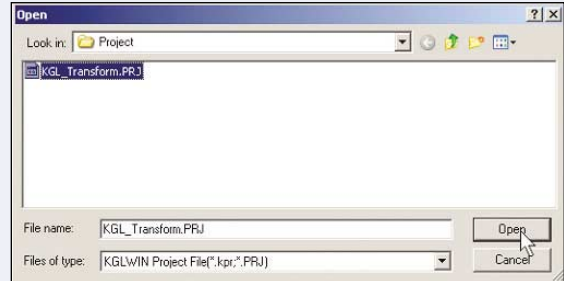

After finishing 'Online Editing'

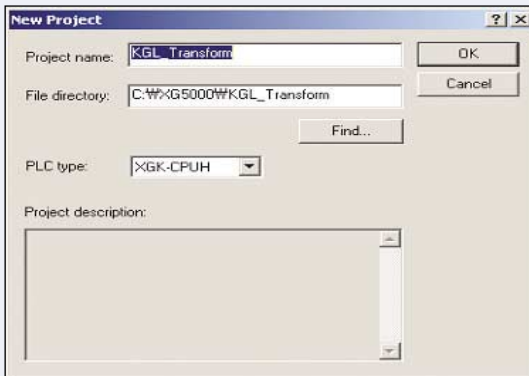

Open a project written in KGL-WIN

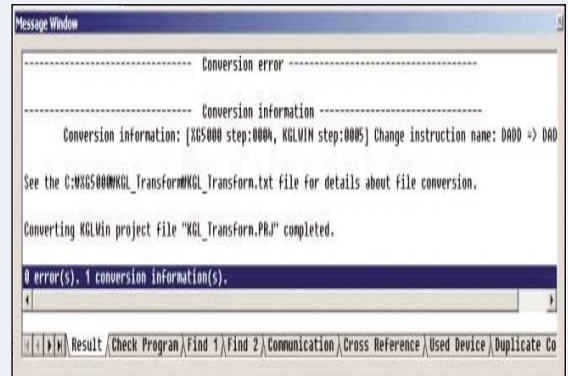

Select [Open KGLWIN file] in project.

Select the file.

Select the type of XGT CPU.

Check converted information in the message window.

Note) Dedicated instructions and special parameters for MASTER-K cannot be converted.
Mostly General instructions and descriptions are converted.
Information impossible to be converted is displayed as ERR.

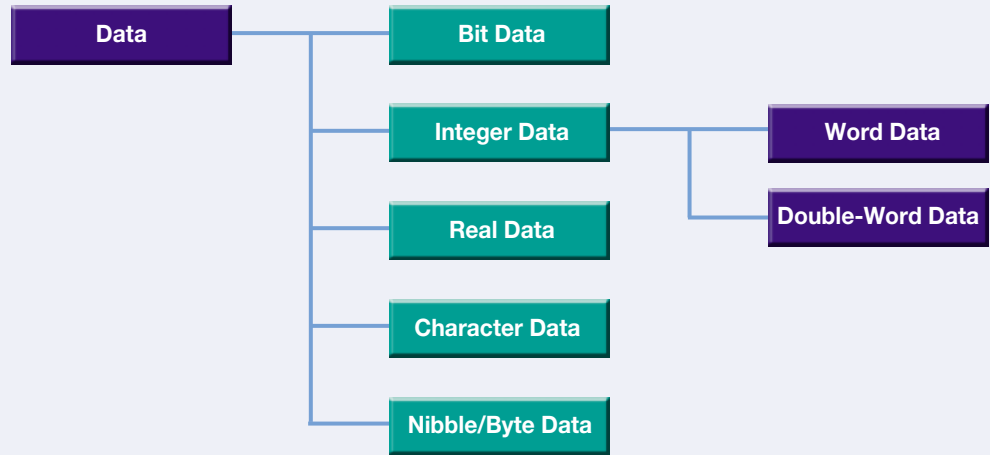

• Content of main special flag (F) change

MASTER-K	XGT	Specifications
F10	F99	ON regularly
F11	F9A	OFF regularly
F12	F9B	ON during first one scan
F13	F9C	OFF during first one scan

For more detailed information, refer to user's manual.

Data type

- Nibble: 4-bit unit data
- Byte: 8-bit unit data
- Real Data: 32-bit/64-bit floating point data

Device Type

Device	Size	Bit Contact	Word Data	Name
P	32768 points	P00000 ~ P2047F	P0000 ~ P2047	I/O Relay
M	32768 points	M00000 ~ M2047F	M0000 ~ M2047	Assistant Relay
L	180224 points	L00000 ~ L11263F	L0000 ~ L11263	Link Relay
N *1)	21K words	N/A	N00000 ~ N21503	Comm. data register
K	32768 points	K00000 ~ K2047F	K0000 ~ K2047	Keep Relay
F	32768 points	F00000 ~ F2047F	F0000 ~ F2047	Special Relay
T *2)	2048 points	T0000 ~ T2047	T0000 ~ T2047	Timer
C *3)	2048 points	C0000 ~ C2047	C0000 ~ C2047	Counter
U	3072 words	U00.00.0 ~ U7F.31.F	U00.00 ~ U7F.31	Special Module Counter
Z	128 words	N/A	Z0 ~ Z127	Index Register
S	128 groups	S00.00 ~ S127.99	N/A	Step Control Relay
D	32K words	D00000.0 ~ D32767.F	D00000 ~ D32767	Data Register
R (Internal RAM) *4)	32K words	R00000.0 ~ R32767.F	R00000 ~ R32767	File Register
ZR (Internal RAM) *5)	32K words	N/A	ZR00000 ~ ZR65535	File Register
R (Expanded)	1M words	N/A	Available as much as extension size	File Register
ZR (Expanded)	1M words	N/A	Available as much as extension size	File Register

Note 1. When communication module is not used, it can be used as internal data area.
 2. Word data in timer shows a current value of relevant bit contact.
 3. Word data in counter shows a current value of relevant bit contact.
 4. Even when using more than 32K words internal RAM, bit contact available to display is R00000.0~R32767.F Also word data enable to be displayed in the range of R00000.0~R32767.F
 5. When internal RAM is more than 32K words, bit contact can be in the range of ZR00000.0~ZR32767.F and word data can be displayed as much as the size of internal RAM

Special module register U

Register for reading data from special module mounted in slot

- Assigning 32 words per slot in U area
- Bit type display available
Ex) U93.12.x (x: Bit location, Hexadecimal display)
- Available to read/write internal memory value of special module without using PUT (P), GET (P), PUTS (P), GETS (P)
- Basic display in U area
Ex) Uxy.z
x: Base number (0~7)
y: Slot number (0~F)
z: Word number of special module internal memory

File register R, ZR

Register that a recorded value is not deleted when power failure is occurred. File register is used for data backup or data storage.

- R: Block unit access
- ZR: Entire file register access
- Internal RAM (Temporary preservation): 32K words
- FLASH (Permanent preservation): 1M words

Index register

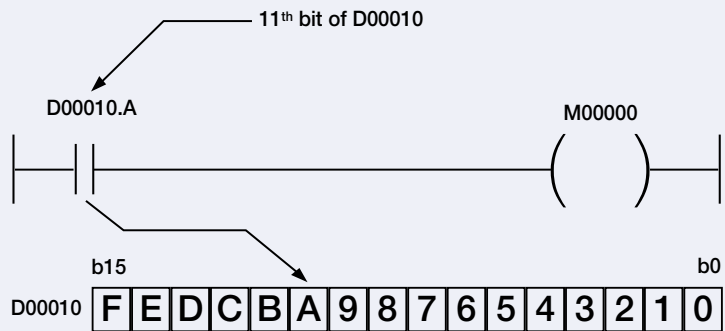

Index register sets up devices using index function.
 The sum of index register value and directly specified device number is real device number.

Available Device

- Bit Device: P, M, L, K, F, T, C
 - Word Device: U, D, R, ZR, N, present value of T and present value of C
- Ex) MOV T1[Z1] D10 : If Z1 is 5, present value of T(1+5)=T6 is transmitted to D10.
 Ex) LOAD D10[Z1].5 : If Z1 is 5, LOAD(10+5).5 => LOAD D15.5 is set.

Bit specifying method of word device

By assigning bit number to word device, bit data is available to use.

In this case, word device number should be addressed as decimal and bit number should be addressed as hexadecimal.

Relevant Device: U, D, R

Instructions

Classification	Designations	Symbol	Description	No. of step
16 Bits transfer	MOV	MOV S D	(S) → (D)	2
	MOVP	MOVP S D	(S) → (D)	3
32 Bits	DMOV	DMOV S D	(S+1 _{ΔS}) → (D+1 _{ΔD})	2
	DMOVP	DMOVP S D	(S+3 _{ΔS} , S+2, S+1, S)	

① **Classification:** Classifies instructions into applications.

② **Designations:** Displays instruction names to be used in program.

- Display rules: Instructions shall be basically displayed in word unit. According to data size, operation characteristics, real number data process, text process, the rules are as follows;
- Based on Data Size & Type
 - D: Double Word related instruction.
 - R: Real Number related instruction.
 - L: Long Real Number related instruction.
 - However, LMOV is 64 Bits transfer instruction.
 - \$: String related instruction.
 - G: Group calculation.
 - 4: Nibble related instruction, used only at the back of instruction.
 - 8: Byte related instruction, used only at the back of instruction.
 - 3: Instruction that process 3 operands, used only at the back of instruction.
- Based on Operation Characteristics
 - P: Instruction that is executed for 1 scan when input signal is changed OFF = > ON

③ **Symbol:** Displays symbols used in program, showing the number of used operands and the type of Source or Destination. Operand display rules are as follows;

- S: Source, with data value not changed after calculated.
- D: Destination, with data value changeable after calculated.
- N, n: The number to process.
- St, En: Start and End, used only in BSFT & WSFT.
- Sb: Source in case Bit position is specified, mostly used in Nibble/Byte instruction.
- Db: Destination in case Bit position is specified.
- Z: Control word, which means previously specified format as based on each instruction.

④ **Description:** Describes general functions of instruction.

⑤ **No. of step:** The number of basic steps of instruction, which means the number of steps in case indirect specification, index formula and direct variable input were not used.

Features

- Convenient user-program, network initial basic setting
- Providing extended monitoring, control function of network system and communication module
- Fast interface with CPU by efficient network management
- Unification of instruction system
- Simple and easy connection using dedicated driver (XGT) and other driver (MODBUS)
- Various built-in Diagnosis functions (Link, Auto-scan, Frame, etc.)
